AppDynamics FedRAMP authorized performance monitoring

AppDynamics is purpose-built for government agencies to efficiently manage applications and drive cloud adoption while maintaining high security standards. Federal government agencies can leverage AppDynamics' FedRAMP authorized solution to deliver reliable performance for mission-critical applications, understand user experiences and better connect the public with critical government resources.

Proactive application performance monitoring

Gain visibility into distributed application environments to identify bottlenecks, investigate performance data and accelerate innovation.

- Out of the box, AppDynamics provides deep visibility into application performance within the public or private cloud, on-prem and hybrid cloud deployments.

- Understand the effect application performance has on user experience and productivity by observing user behavior to prioritize fixes that impact the most people.

- Find and fix weak points in code, infrastructure and databases to quickly pinpoint the root cause of issues before they become widespread

End-to-end mission visibility

Understand how application performance contributes to or detracts from mission objectives with code-level visibility.

- Business IQ correlates application health to mission outcomes in real time, providing a single source of truth across teams.

- Understand normal baseline activity and flag anomalies in performance behaviors to address problem areas to improve agency and mission outcomes.

- Comprehensive dashboards built with measurable mission and technical KPIs show whether applications are running as expected or abnormally, the impact on users and how application code and IT infrastructure can be optimized for better performance and reliability.

Ensure seamless cloud migration

Execute cloud migration strategies on time and on budget with real time performance monitoring that detects roadblocks before, during and after your transition to cloud.

- Baseline every application, user experience and key infrastructure metric for clear performance insights to guide your planning, prioritization and cloud infrastructure sizing.

- Leverage data to scale, measure and optimize post-migration, to ensure user needs are met within your allocated budget.

- Get full visibility into every application and dependency through AppDynamics flow maps and immediately identify where and why an issue has occurred.
