The next generation of application performance management

Distributed web applications often contain frustrating blind spots and mysterious, recurring problems. Only AppDynamics delivers the simplicity, visibility, and deep diagnostics that Ops and Dev teams require.

The new world of government applications has created a whole new set of challenges for agencies tasked with ensuring application health and performance. Modern application architectures, new technologies, and a rapid rate of change have created a perfect storm of complexity in today’s applications. As a result, performance problems surface that are often difficult to identify, diagnose, and fix.

With AppDynamics, federal IT teams can efficiently consolidate resources by optimizing the performance of applications. It’s more important than ever to have a simple yet fast way to monitor, diagnose, and resolve application problems before they affect revenue.

Introducing AppDynamics for federal agencies

With AppDynamics, agency IT organizations can:

- Proactively monitor end user experience from any location and cities
- Auto-discover and map application and transactions without manual configuration
- Bridge the gap between development and operation teams to increase collaboration and lower MTTR and troubleshooting costs
- Find the root cause 90% faster with diagnostics with less than 2% overhead in production

“Our Mean-Time-to-Repair used to be days or hours. With AppDynamics, it’s now a matter of minutes.”

Neil Hartner,
Senior Architect, Overstock.com

Leader, Magic Quadrant for APM
AppDynamics for agency IT organizations

AppDynamics enables agencies to comply with mandated service level agreements (SLAs) and American Reinvestment and Recovery Act (ARRA)- required internal control and accountability objectives including:

Transparency in federal agencies
The federal CIO and CTO have mandated increased transparency in federal agencies. With AppDynamics federal agencies benefit from end-to-end visibility of how business transactions execute across and inside the applications infrastructure, gaining 10x their current level of visibility.

Enhanced experience and service for citizens
For many federal agencies, malfunctioning applications can significantly impact the ability to respond to end user requests. AppDynamics allows federal agencies to understand application performance from the end user’s perspective and proactively monitor the experience to identify potential issues before they become application performance failures.

Increase collaboration across federal agencies
AppDynamics dashboards provide comprehensive coverage of common application performance issues. We allow agency IT organizations to monitor, troubleshoot, diagnose, and scale their production applications – fostering collaboration across Federal Agencies and System Integrators for a reduced MTTR in response to application challenges.
