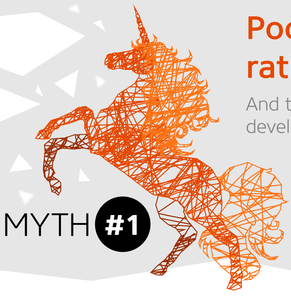
Top **5 Mobile** APM MYTHS

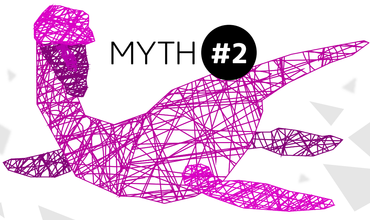


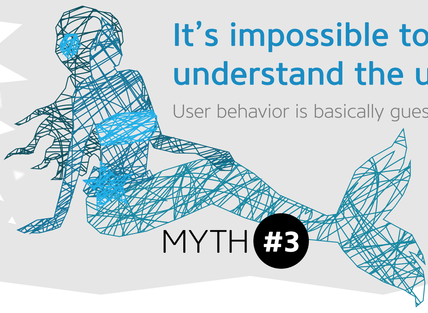
Poor App Store ratings are unavoidable

And there's nothing a mobile app developer can do about them

Backend services are a black box

It's nearly impossible to pin-point the root cause or bottleneck issues in a complex app environment



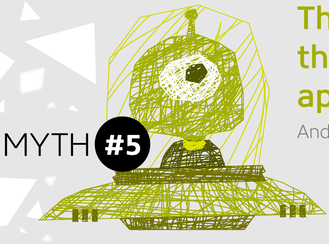


It’s impossible to understand the user

User behavior is basically guesswork

You'll spend an endless cycle catering to all users with different devices, OS's, and networks

iOS vs. Android, iPhone 3, 4, 5, 6...., bazillion Android phones, the list goes on



There’s no way to know the business impact of app performance issues

And analyze lost revenue
