The next generation of application performance monitoring for your .NET application

Complex .NET web applications often contain frustrating blind spots and mysterious, recurring problems. Only AppDynamics delivers the simplicity, visibility, and deep diagnostics that Ops and Dev teams require.

The new world of distributed web applications has created a whole new set of challenges for those tasked with ensuring application performance. With the shift toward service-oriented architectures (SOA), applications now operate in rapidly changing environments. As a result, performance problems surface that are often difficult to identify, diagnose, and fix.

As these applications become increasingly critical to the business, it’s more important than ever to have a simple yet fast way to monitor, diagnose, and resolve application problems before they affect revenue.

AppDynamics allows you to monitor your .NET application in production so you get real-time visibility of performance and can find the root cause of code bottlenecks in seconds, all with minimal overhead. The root causes of performance problems can be very different and complex to locate, while the result is usually simple—a slow or unavailable web site. AppDynamics reveals the internals of your application through application flow mapping and infrastructure through .NET business transaction level visibility and proactive monitoring enabling detailed analysis, fast troubleshooting, performance and capacity optimization. We allow companies to monitor, troubleshoot, and diagnose their production applications, gaining 10x their current level of visibility and getting to root cause 90% faster.

Key benefits

- Visualize your entire application, from browser to backend database
- Troubleshoot bottlenecks 90% faster with deep code-level diagnostics
- Automate common fixes with Application Run Book Automation
- Complete visibility into real user experience across both web and mobile applications, with real-time information on browser, network and server performance

"With AppDynamics we were able to solve complex problems that had been in our application for years."

– Kevin Siminski, Director of Infrastructure Operations, ExactTarget/Salesforce
**Who is it for?**
- IT Operations
- Production Support
- Developers
- Architects
- Anyone whose phone rings when the application is having problems

**Problems solved**
- Uptime & Availability
- Slow response time
- Memory Leaks & Thrash
- Stalls
- Deadlocks
- Slow database response
- Database connection pool areas
- End-User Monitoring
- Mobile APM

**Supported environments**

**.NET framework version:** 2.0, 3.0, 3.5, 4.0, 4.5

**OS:** MS Windows Server 2003 (32 bit & 64 bit), MS Windows Server 2008 (32 bit & 64 bit), MS Windows Server 2008 R2, MS Windows Server 2012

**Runtime environments:** MS IIS 6.0, 7.0, 7.5, 8.0, MS Sharepoint 2010, 2013 as services running inside IIS, Managed Windows Services, Managed Standalone Applications

**MS Windows Azure Cloud Services:** (Web Roles and Worker Roles)

**Automatically discovered BTs:** ASP.NET, ASP.NET MVC (MVC 2, MVC 3, MVC 4, MVC 5), .NET Remoting, WCF, Web Services including SOAP

**Message queues:** Apache Active MQ NMS and related MQs, IBM WebSphere MQ, RabbitMQ, TIBCO Enterprise Message Service, TIBCO Rendezvous

**ADO.NET clients:** Oracle (ODP.NET 10, 11, 12), Microsoft Provider for Oracle (10, 11, 12), MySQL 5.x, Microsoft SQL Server• 2005, 2008, 2012

**Supported loggers:** Log4Net, NLog, System Trace, Windows Event Log

**Try it FREE at appdynamics.com**
